SUMMARY

Highly motivated B.Tech Computer Science student with a strong academic record (CGPA 8.28) and practical experience in full-stack development, mobile application development, machine learning, and IoT systems. Proven leadership skills through leading multiple technical projects. Seeking an internship to leverage technical skills and project experience in a challenging, real-world environment.

EDUCATION

B.Tech in Computer Science and Engineering2023 – Present

TKM College of Engineering, Kollam | CGPA: 8.28

- Qualified GATE 2026 (Graduate Aptitude Test in Engineering) — Computer Science & IT
- MOOC Course: The Joy of Computing using Python
- Attended Implementing AI using Microsoft Azure Workshop — IITM Shaastra 2025
- Attended App Development Workshop — IITM Shaastra 2025

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, HTML, CSS
Mobile Dev	Flutter, React Native
Web Dev	MERN Stack (MongoDB, Express.js, React.js, Node.js)
Databases	SQL, MongoDB
Machine Learning	PyTorch, MobileNetV2
IoT	ESP32, Arduino IDE, Wi-Fi Control
Game Development	Pygame, Scene Builder (JavaFX)
Tools	Git, Netlify, n8n

PROJECTS

Student-Teacher Management AppFlutter, Node.js, SQL

- Cross-platform mobile application with Flutter frontend, Node.js backend, and SQL database for managing student and teacher activities
- Role: Group Leader — responsible for overall project architecture, backend development, and team coordination

Student Notes Management WebsiteMERN Stack

- Full-stack "note social media" platform where engineering students can upload and access notes after administrator verification
- Role: Group Leader — led tech stack setup, database design, and frontend/backend integration

Personal Finance Tracker with Integrated MLMERN Stack, Grok API

- Full-stack web application for tracking and managing personal finances with intelligent categorization and insights via the Grok API

- Combines financial management with ML-driven recommendations for a socially relevant user experience

Wi-Fi Controlled Smart Light using ESP32ESP32, Arduino IDE, Wi-Fi

- Built an IoT system using an ESP32 microcontroller to control a light remotely over a local Wi-Fi network
- Hosted a lightweight web server on the ESP32 to serve a control interface accessible from any browser on the network
- Implemented GPIO control logic to toggle and adjust light state in real time with minimal latency

Gender Classification ML ModelPyTorch, MobileNetV2

- Trained a deep learning model for gender classification using the MobileNetV2 architecture for efficient and accurate inference

Personal Portfolio WebsiteHTML, CSS, Netlify

- Designed and deployed a personal portfolio website using HTML/CSS, hosted on Netlify to showcase projects and skills
